

tural models. They do not traditionally work for home based consumers on customised products but are willing to take on larger scale objects or products if called upon.

Maker Meet or Maker Parties in India

If you are interested in getting more involved in the Indian scene of 3D printing, from design and software to making your own 3D printers, its worthwhile to keep a lookout for “Maker Meets”. Makers are informal and decentralized communities of individuals who are interested in do-it-yourself solutions and are very supportive of the 3D printing technology. They occasionally organise and host meets in different locations where

they meet, share, experiment and teach their experiences with 3D printing. The most recent Maker Meet took place in Bangalore in September 2013.

The meet was sponsored and organised over social media, with assistance from Mozilla India and the Hive Learning Network. They can be found over Facebook.
