

make most of the gun control laws seem moot.

- **Theft:** Skimmers are bogus credit card/ATM card readers that are attached atop or nearby the original reader which, upon swiping a card, can read all the information pertaining to that card. The possibility that ATM skim-

ATM skimmers

mers are already being manufactured using 3D printers is pretty high. And though the usage of 3D printers for producing counterfeit money hasn't really been on record as of yet, the possibility of doing the same does not seem very farfetched. These are machines that can use various materials and print with amazing accuracy and precision – so naturally, producing counterfeit money seems like a very likely usage. And even daily household robberies would become so much easier. There has been a reported incident of a German hacker being able to replicate handcuff keys using just the photograph of the actual key. Thus, even though thieves have always been able to copy keys, the whole process is made so much easier and in many cases, more plausible.

- **Ethics:** The medical application of 3D printing to produce living tissue and organs is sure to cause ethical debates amongst various aspects of society. The technology involved in bioprinting is advancing so quickly that it might get into medicinal use before the general public are able to understand and accept the ramifications of this technology. Bioprinting has already made waves, and though most of these initiatives are intended well, they raise a lot of questions that are still unanswered. The obvious doubts that remain are as to who has control over the material (stem cells) required to make these organs or who will be allowed to be able to produce them for whatever purpose? And once they do produce it, who takes responsibility for the quality and the failure of the resultant organs? Nevertheless, the day when human organs are 3D bioprinted and are readily available is just round the corner, and when the day does come, a lot of interests – moral, political, social and financial – are going to influence this debate.
