

never be too safe, and extremely sensitive information such as credit card information merits additional security. It's better not to store such information online. If you're a conspiracy theorist and believe that the entire internet is being monitored by the NSA or aliens alike, then it's better you stay away from online tools as they're likely not the choice for you.

Interface

There's no doubt that overall, traditional office suites are visually more appealing. But online suites are not far behind and are now being based on Java to amplify their visual appeal as well. When it comes to interface though, familiarity is the key. Users usually take to software that they find familiar and intuitive. Microsoft Office, being the traditional favourite, has been emulated in the interface of many office suites. This is a definite selling point for these software.

Cost

While cost might not be a huge problem for organisations, it usually is for most individuals. Many online suites are considerably much cheaper, or even free in some cases.

That's the starting point for everything you need to know about productivity suites. Hang on tight as we move on to explore office suites in detail.
