

```
sudo insmod /lib/modules/3.4.0/kernel/drivers/net/wireless/wl.ko
sudo depmod -a
```

On executing the above command you will find that Chrome OS can now detect wireless networks having successfully partnered with your wireless card.

On Dell machines wireless card detection can be managed in the following way:

1. Login to Chrome using your account.
2. Press [Ctrl+Alt+F2] for the developer terminal
3. Type in: `cd /etc` and press Enter
4. Type in: `sudo -s` and press Enter
5. Type in: `.install_wl.sh` and press Enter.

This should install the drivers necessary to access the wireless card on your machine.

TrackPad/TouchPad Issue Troubleshooting

Touch input is supported on Chrome OS. Definitely give it a try.

In rare cases there are known to be glitches with the touch pad of a laptop. The following steps will help solve this problem.

1. Login to Chrome using your account.
2. Press [Ctrl+Alt+F2] for the developer terminal
