

Things can be pretty boring the regular way

the teacher's attention with several others means that there is always that one kid who asks question after question and ends up having an argument with the teacher because he loves the attention.

How smart is your class?

The next disadvantage comes from the method of teaching. It's a known fact that an individual can grasp concepts much faster using visual aids. But the fact that not every classroom comes equipped with AV systems and that teachers still rely on explaining concepts to students verbally, really throws a spanner in the works. The problem that stems from having a classroom that has 'smart' capabilities is that even if you do have a smart classroom decked with all the bells and whistles, the amount of information that can be shared via these systems isn't much and the average 'smart' classroom isn't any smarter than the rest.

Socializing

Class rooms, especially in school and college are filled with people of roughly the same age group. But the chances of you working with an entire team that's the same age as you are pretty slim. This translates to problems when it comes to interacting with people that are of a different generation. Another problem faced by students in some tradition bound societies is the fact that
