

scores here because everything is a one to one interaction. The video you just watched on Khan Academy for instance tells you everything you need to know. But if you're still unsure about something, the instructor is merely a click away. The only downside is the fact that the law of the nest applies here. The chick that asks for food is that one that receives it.

Your entire program will be self paced. This means that even if you don't understand something, you decide when you move further. This greatly helps different people learn at a pace that they are comfortable with. The days of the entire class being rushed to complete the syllabus before the annual exams will soon be long gone from the looks of things.

Also because all the content is there at your disposal either on the cloud or in a DVD, you can always get back to it without taking out time especially for a refresher.

Once you leave school or college, it's still necessary to stay up to date with things. E-learning helps bridge the gap created by allowing working professionals to learn new skills or understand advancements in a particular subject from the comforts of their own free time.

Not being able to learn about something because the necessary information is not available in your current location is also addressed with e-learning migrating to

Catch 'em young.

the internet and adopting video hosting services like YouTube. Thus not only can you study when you want, you can study where you want too.

Yet another facet on which e-learning scores over a traditional set up is in how much is retained at the end of the session. While in a class room, the idea being conveyed is aided by maybe a few illustrations in the text books and may be a few charts, the information on an e-learning platform can
