

E-learning, bringing soon a school near you.

include audio-visual aids like videos, applications, quizzes, games and much more.

And with this advantage, e-learning is able to score over the traditional form because this makes the entire learning experience a lot less monotonous. The fact that you decide when the lesson starts and begins allows you to refreshen up or clear your mind before attacking the eighth chapter in advanced calculus.

While e-learning may not be an alternative to school, at least not yet, it seems to be taking steps towards the end of another system just as counter productive as regular

schooling. What it does is very effectively replace the concept of having a full time tutor or attending extra classes after school. The fact that most high school concepts are available on YouTube and a host of other websites, means that students can skip ahead of the easier concepts and focus more on the truly tougher stuff on their own. But where e-learning really shines through is as an alternative to actually going to college.

While it is still necessary to appear for examinations under a university in order to earn a degree (if you're in to that kind of stuff), the whole thing can be done through correspondence and e-learning, giving you enough freedom to spend your time doing something useful instead of earning a bachelor's degree in commerce.

Offices Anonymous

Another set of people who can really benefit are the working professionals. The potential benefits of e-learning can be reaped by individuals interested in developing skills at a personal level as well as organizations who are looking to developing the skill set of their employees. The biggest factor that deters a working professional from taking up any course is
