

Udacity's courses are interactive with periodic quizzes

earning a passing grade in this course earns you a transfer credit towards Georgia University (provided you take the final exam in a supervised environment). Similarly, the Javascript course is taught by Brendan Eich, the creator of the Javascript language and former CTO/CEO of Mozilla. The stress here is on a one-on-one mentoring with a coach, so that the learning is more personalized and effective. Coaches check on your performance between tests, and to earn a verified certificate, you have to go through a 30 minute interview after you complete your course, where you describe your project in detail to your coach. Udacity is heavily centered towards software-related courses such as Algorithms, Web Design, Machine Learning and Data Science, so all the evaluation is done automatically by Udacity's servers. Udacity is currently trying to develop a complete curriculum of Computer Science courses, that if successfully completed, would lead to the equivalent of a degree in Computer Science.

Notable Courses: Introduction to Computer Science, Artificial Intelligence for Robotics, Introduction to Data Science

3 Udemy (<http://dgit.in/FTUdemy>)
Offering up a wide spread of courses in fields ranging from (the obvious) Computer Science, Languages, Photography, Design, Humanities and Finance, Udemy is akin to an "App Store" for online courseware. Most courses are paid-for, with prices ranging between \$50 to \$300. Udemy
