

edX has a very diverse offering of courses.

are weekly assignments called Problem Sets (which increase in difficulty as the course progresses), computerised grading systems and peer reviews and discussions. Should you run into any difficulty in your coursework, you're encouraged to reach out to your instructors over email. Courses typically feature a midterm and final examination, and you receive a detailed report of your performance at the end of the course, with a class-wide grade distribution histogram. Courses are usually offered free of cost, with some providers offering a paid Verified Certificate. A special feature called an XSeries Certificate can be earned by a student as proof of competency in a particular domain by completing 3-4 courses in that area.

A shining example of the quality and popularity of edX among institutions was when the Linux Foundation opted to offer its "Introduction to Linux", a course that typically costs more than \$2000, for free on edX, to an unlimited number of students. The course witnessed a record number of registrations, which only goes to show the demand for low-cost, high-quality computer education among the world's masses.

Notable Courses: Introduction to Computer Science, Introduction to Linux, The Science of Happiness, Introduction to Water and Climate Change.

5 Justin Guitar (<http://dgit.in/FTGuitar>)

Learning to play the guitar is one hobby that a lot of people want to learn, but it's always in the distant future. Playing the
