

courses, so no matter how whimsical a skill you want to learn, you'll find something to suit your taste.

9 Mozilla Developer Network (<http://dgit.in/FTMozilla>)
Mozilla are huge supporters of the open web, and they host some of the most comprehensive web development tutorials on the web. You can learn web development from scratch using HTML, CSS and Javascript, or brush up on more advanced concepts. The site has comprehensive and high-quality tutorials on the newest web technologies, including Firefox OS, WebGL and MathML.

Mozilla's Developer Network teaches you the basics of Web Development.

In addition, MDN also serves as a knowledge repository of sorts, aggregating web development tutorials from other parts of the web, sorting them by difficulty level. If you're just getting started with web programming, you'd be hard pressed to find something as thorough as Mozilla's material.

10 Saylor (<http://dgit.in/FTSaylor>)
Saylor is relatively little-known, but it's a goldmine of online courseware. They hire qualified professors and teachers to teach their courses, emulating a real university by organizing courses into 'Programs'. These courses can all be taken individually, of course, but by completing these programs, you'll have a better understanding of the discipline as a whole. This is in contrast to sites like Coursera which offer individual courses with no real connection to one another, which can sometimes leave gaps in your learning. Saylor organizes these pro-
