

grams into “Core Programs” which are essential to any discipline, along with other “Elective Programs” that can be taken optionally. Advanced courses usually have other, more fundamental courses as prerequisites. You can pick and choose individual courses as well, but if you’re looking to truly master an area of study like Science, Economics, History, Literature or Political Science, we highly recommend you treat it like a regular University program. All courses are free of cost and self paced, with no fixed start or end date.

11 iTunes U (<http://dgit.in/ftiTunesU>)

What initially started out as a collection of audio and video podcasts of lectures by universities such as Stanford and Harvard, has now turned into a full-fledged learning platform, with Apple even releasing a standalone iPad app for it 2 years ago. Universities like MIT, Yale, and even the Open University create course content that matches a regular course, with videos, notes, supplementary reading and even textbooks (if they’re available on iBooks) integrated into one app. The app resembles

iTunes U on the iPad aggregates lecture videos, notes, and other courseware.

different tabs for different kinds of content - one for course information, another for books, handouts and reading material, one for the lectures themselves and one for notes taken by the student. Courses are all free of cost - Apple doesn’t pay the universities for the courses, and neither

are students required to pay to take any of these courses. Unlike Open CourseWare material released by Universities, lectures for iTunes U have to be separately recorded, with strict time constraints for each video. Even though these courses are publicly backed by big-name Universities, no course credit is awarded by them.

Notable Courses: Stanford’s course on making iOS 7 apps.
