Carnegie Mellon University

The Carnegie Mellon University (CMU) was founded in 1900 by Andrew Carnegie who was an industrialist and an philanthropist. The university is involved in solving some major societal, technological and scientific challenges, and place a special emphasis on creation of everything, from art to robotics. The Carnegie Mellon University gets 100 per cent of its energy from green power sources and is known as a leader in green power. They had also created a self-driving vehicle which went on to win the DARPA Urban Challenge 2007. Their more historical achievements include robotic machines created in the early 1980s that cleaned up the nuclear waste at Three Mile Island and its prototype which was used to

clean-up the waste after the Chernobyl accident in Ukraine. An even earlier achievement in 1955, was a step towards artificial intelligence by creating a computer language to model complex human problem-solving processes.

Its free courses are available under the topics American English Speech, Arabic for Global Exchange, Anatomy & Physiology, Argument Diagramming, Biochemistry, Elementary French, Engineering Statics, Healthcare , Information and Management Systems, Introduction to Biology, Introduction to Chemistry, Introduction to Psychology, Logic & Proofs, Media Programming, Modern Biology, Principles of Computing, Probability & Statistics, Responsible Computing, Statistical Reasoning, STEM Foundations and STEM Readiness.
