

done it right, you remain mentally alert well beyond the game.

Unfortunately it's not totally free. The free version allows you to choose certain goals which are the number and kind of games you want to play and mental faculty you want to improve. It only allows you to play a certain number of games a day. Subscribers of course will get more out of the app, but the subscription fee is pretty steep at almost a hundred dollars a year. However it has definitely proved to be effective with over 50 million users worldwide.

The app was designed by neuroscientists, and works on creating a Personalized Training Program to train and develop your memory, attention span and more. Several research studies have proved it to be more than effective and labeled it a 'workout for your brain'.

Lumosity continually updates itself with new games every so often so as to prevent things from becoming dry or dull. Their wide variety of games has something to attract every type of user.

When you sign up for it, Lumosity asks you what sort of mental improvements are you looking to make. For example you could be trying to be better at remembering people's names or be better at keeping track of where you've kept stuff you use daily like keys, books etc.

Lumosity has launched a Human Cognition Project (HCP) which is aimed at understanding and exploring the human cognitive abilities. This is a collaborative effort between their own in house science team and various other academic experts like scientists, clinicians and educators. The HCP

researchers are currently running studies on topics such as the relationship between physical training and mental exercise, age related cognitive decline and interventions for Post Traumatic Stress Disorder (PTSD).
