

A very thoughtful feature is that if you want a program that is not in their repository you can go online and request it by specifying the relevant tags like 'java', 'sorting', 'learning' etc. They promise they will update the repository as soon as they can.

As with all good e-learning apps, Code box too is a free app and is becoming a favorite of all engineering students.

How To Draw – Art Lessons

Creative and love to draw but just not that good at it? How To Draw – Art Lessons is the perfect way to learn how. It's fun, fast and easy with over 600 tutorials. There were originally many How To Draw tutorials all available as different apps before the Draw Art Studio decided to combine them all into one big e-learning tool for drawing. You can learn how to draw cartoons, animals, anime, just about anything. How To Draw will keep you doodling well after you've finished using it.

With this app the user is spoiled for choice when it comes to selecting what to learn. Drawings are categorized to help with this. Once you select a subject, you are presented with a step by step tutorial.

You can go at your own pace. There are previous and next buttons so that you can go backwards and forwards to perfect certain steps. At most there are 30 steps per tutorial. There is even an onscreen drawing option though nothing can replace the feel of an actual pencil and paper.

While drawing onscreen the app provides you with a whole lot of tools like brushes, colors, transparency, panning, zoom, etc. The zoom feature

is really helpful with perfecting the details. Once done you can show off your skills by sharing the drawing with friends via Skype or Facebook.

How To Draw – Art Lessons is available for free and is the perfect tool for students to perfect techniques and find tips for drawing. Once you get
