Earthviewer

Earthviewer is one of the coolest e-learning apps out there. It serves as a time machine to explore the geological, geographical history of the world. The idea alone deserves a lot of credit. That coupled with the animation and information it presents, makes for a truly phenomenal e-learning app.

The app has a 3D globe on the right hand side which rotates allowing you to select your region of interest. On the left hand side is a virtual slider which will take you back to earlier ages as far as 540 million years ago. Beside the slider are strips showing the Eon, Era and Period which are clickable for a brief pop up description. You can peruse through the past 4.5 billion years of history. You can watch an entire landmass as it shifts
