Medscape

WebMD is a popular medical site, with tons of information. It is both a well regarded and well trusted site as far as medical news and content goes. In 2009 the developers of WebMD decided to bring this information to mobile devices and launched an app called Medscape. Medscape is now the most popular medical app for download. It's used by medical students, physicians, nurses almost everybody in the medical profession.

All its features are available for free. There is even an option for offline access
