

Note Perfect really helps with actual musical tests like Sight Reading. It improves speed and increases your confidence and comfort with the different clefs and switching between them.

The games are timed, so you are scored not only on your ability to identify the notes properly but also on how fast you can do it. High scores can be shared and matched with friends.

Right Note

While Note Perfect trains your eyes to correctly identify musical notes, there is another app that helps you learn to identify the note by the sound of it.

There is both a free and paid version of this app so you can try it out before purchasing. Its exercises include intervals, pitch recognition and melody training. As with Note Perfect you can do this at different experience levels. When you identify the wrong note the app plays both correct and incorrect answers so the difference is easily identifiable.

Right Note is useful with Ear Tests and for students learning singing. Right Note also has a feature called Microphone Recognition where you can play using your own musical instrument.

Khan Academy e-learning Apps

Khan Academy is a famous non-profit organization created by an educator called Salman Khan. It was started with the intention of providing a high class education to anyone, anywhere. He has made thousands of educational resources available online. There are lectures, tutorials, exercises in languages ranging from English to Norwegian to Kannada. The Khan Academy receives funding and support from the Bill and Melinda Gates Foundation. Google and the Carlos Slim Foundation are also known contributors.

Recently its resources were ported to the mobile platform to make them even more widely and easily available.

KhAndroid

Khan Academy was started in 2006. In 2013 KhAndroid was published to the play store by the IDEAL Group Inc. KhAndroid is the app developed by Khan Academy which allows users full access to their huge library of
