

micro lectures. The subjects these lectures cover are many – chemistry, economics, biology, finance, astronomy, healthcare, cosmology, computer science, physics, etc. This is a great app to learn about a wide array of topics.

The user interface is clean and uncluttered.

KhAndroid as the name suggests is available only on the Android platform. For the iOS platform Khan Academy has a different app.

Android - <http://dgit.in/1kUcTas>

Khan Academy for iOS

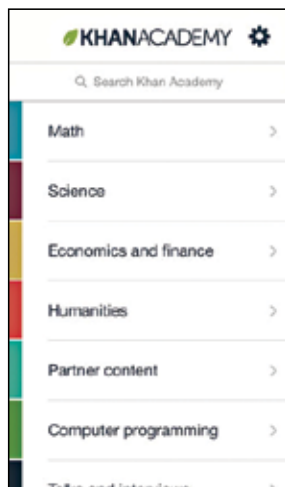

Khan Academy themselves launched their official iOS app called Khan Academy. As with the Android one all resources are free. Pick a topic or subject and spend some time learning from their resources. They even help you prepare for the SAT exam. Users can download videos or even entire playlists and watch at their own leisure. The iPad app is slightly superior to the iPhone app in terms of usability but the content is the same.

From completely everyday classroom

topics like how gravity works to obscure topics like fire stick farming in Australia, Khan Academy has it all.

Cousera

Cousera is another education app with a difference. It connects students, professionals and other learners from everywhere with free online courses. These courses are ones offered by top notch colleges. Only the best of the best is provided by Coursera. These courses are taught in 14 different languages and come from over a hundred top tier global institutions and universities. Amongst these are Stanford and Anthony Hopkins. Thus you have the best instructors, from the best institutions at your fingertips.

There are over 20 subject areas with over 600 courses. These of course are more formal lectures than what Khan Academy or TED has to offer. To
