

you're getting some quality stuff here. Not only that but each subject has a course structure along with videos, documents and syllabus. There is also an introduction of the professor with the prerequisites required for the course. Thus you go in fully prepared and very organized.

The platform also offers hundreds of subject matter experts to whom you can ask questions to when in doubt.

My Open Courses is an initiative started by the National Programme on Technology Enhanced Learning which aims at using Technology to spread education to everyone. It was started and funded by the Ministry of Human Resource Development in India.

My Open Courses has 25 courses, 1300 subjects and over 11000 hours of videos. What makes it different from other e-learning apps like Khan Academy, Udemy, Coursera is its focus on curriculum offered for professional courses like Engineering and Management.

There are plans to offer online certification courses soon as well as assessments designed by IIT staff.

NASA App

The NASA app released by NASA themselves and aggregates a whole lot of content regarding developments and ongoing missions. There are many apps devoted to NASA from other sources but this app has extensive information. Since it comes directly from the mother ship it is guaranteed to be original content.

The app opens up to a grid of its contents like Images, Videos, Missions, Tweets, News & Features, Programs etc. Selecting each opens a new page packed with content.

All the latest news and articles released by NASA are uploaded here first along with videos from around the agency.
