

capability and has the ability to publish in HTML5 though it has limited capabilities on that front as well. It is an incredibly useful software to create interactions though. Overall, a solid product.

- ▶ **Litmos Author:** It is a cloud based platform where assets can be gathered from anywhere to create a single collaborative platform. It converts and optimizes graphics, audio, videos, Powerpoint and can publish in both Flash and HTML5.
- ▶ **Brainshark:** It is a cloud-based tool that enables you to create presentations which you can easily integrate into your course design. You can utilize a wide variety of media types – including videos – when producing the course with Brainshark,
- ▶ **Dominknow Claro:** It is a next generation cloud based authoring system that has a remarkable set of features that includes HTML5 output, collaboration, objects, branching, SaaS, zoom and so many more. But the best part about it is that even people with Zero to limited tech skills will find it extremely easy to use.

Claro ::::
work together, better

The above tools are remarkably powerful and will do an incredible job of creating course content for you, though all of them cost a fair bit. If that is a problem though, there are a bunch of free alternatives that are available. We pick out the best ones for you:

- ▶ **Dipity:** This is probably the most user friendly timeline creator on the web. Users, known as Dipsters, can create their own content on
