

Is life really set?

However, now, human civilisation will finally evolve at the speed that it should long have done. Thanks to technology and the benevolence of certain universities and social entrepreneurs, higher education has become free and easily accessible to the masses. But even then, thousands of students feel jaded either because they are cooped up in classrooms or because they feel that they'd be someplace else if it wasn't for the useless degree they currently hold.

Fortunately for them, the solution is here and had been around for quite a while. It's called E-learning and includes any form of education disseminated via electronic media. This includes the use of CDs, DVDs, YouTube videos and even a local intranet. The education being offered is of some of the highest quality that was only accessible to those who could afford it. Some of the top universities have started offering their courses online in video, audio or document format. Anyone who has an internet connection can access these courses for free and enhance their knowledge. And with the advent of powerful and cheap handheld devices, you won't be stuck in front of a computer and can access this knowledge from anywhere.

While the term e-learning has been in use only since 1999, the idea of e-learning has been around for a long time. In fact the concept of a computer based training programme has been around since the 60's when PLATO
