

E-learning instructors are responsible for making the videos engaging

still not convinced, here are a bunch of stats that erase any doubt in the skeptic's mind of how big e-learning is:

- ▶ An estimated 7 million students take at least one online course, and by 2019, approximately half of all college classes are estimated to be e-learning based.
- ▶ Over 42% of Fortune 500 companies use some form educational technology in training their employees during formal hours, and this number is only going to increase.
- ▶ Companies who adopt e-learning tools for their training generate about 26% more revenue per employee as opposed to those who don't. Also, since e-learning has proved to be more effective in terms of retention (not only cost), IBM says that companies that utilize these tools can boost productivity by up to 50%.
- ▶ Today, e-learning is a \$56.2billion industry, and it's predicted to double by 2015.

Clearly e-learning is making its mark, but it hasn't fulfilled even close to its potential yet. E-learning is expected to grow at exponential rates, and this isn't really surprising. Thanks to the major advances in technology in recent times, e-learning also has gone through changes of unprecedented magnitude. Due to the number of devices available and the continuous expansion of internet and mobile networks across the world, distance has long since become moot as a barrier for effective communication. And this definitely impacts e-learning directly, as now the opportunities for students the world over to access world-class content available anywhere across the
