

- ▶ **HTML5:** HTML5 is almost always in technology news these days. The rapidly emerging version of the HTML open web standard has the ability to natively support advanced graphics, video, animations etc. – all of which essential set of capabilities required by e-learning. Over the past year, the number of top websites that used HTML5 compared to previous years more than doubled. HTML5 eradicates the need for multiple apps, and hence the existence of one HTML5 app guarantees convenience, quicker updates, and better maintainability.

- ▶ **xAPI:** Experience API (or) xAPI is one of the most exhaustively discussed topics in the e-learning world today. It enables the collection of data about the learning experiences that an individual goes through – information that is quantifiable, sharable, and trackable. No longer will we need to guess how well the employees are reacting to their training methods, as xAPI will give us solid, quantifiable answers to the same and track progress of each individual. xAPI records employee activity – including e-learning, m-learning, games, online reading, social media etc. – and

sends this information to a learning record store which can be accessed to generate meaningful data. It has innumerable practical

implementations and can evolve even further, revolutionizing the way we learn, creating personal learning environments. Also, armed with details of a host of employee learning experiences, organisations will be able to provide the ideal environment to suit the learning environment. Along with these technological developments, a lot of new e-learning trends are bound to arise. We list some of them:

- ▶ **MOOCs:** They are undoubtedly the hottest trend right now, and are definitely going to continue in the same vein as they have been. World famous universities like Harvard, MIT, Berkeley, Caltech etc. have jumped onto the MOOC bandwagon, and the changes to the traditional method of university teaching are inevitable and will be profound. A blended learning approach is bound to take over where the online course content acts as a complement to classroom learning. And since MOOCs are going to be so widespread, they will eventually start becoming a serious alterna-
