

tive for students looking for a degree. Currently a majority of the MOOCs are free and give you a Statement of Accomplishment upon completion of the course. They are usually looked at as supplements to increase your knowledge in a particular field, but not necessarily as a certificate that approves of your mastery in the respective field. However, with the expansion of MOOCs there should come a time when there will be official grades, and credits, that can be transferred from one university to another. Of course this involves the presence of an instructor, the use of technology to facilitate the process and in many cases webinars, discussions etc. meaning that they will eventually turn to being a paid service. And yes, all of this also opens up a ton of career opportunities. We'll get to that later though.

MOOC Statement of Accomplishment

- ▶ **Social media for learning purposes:** Most people, including workers, are plugged into social networks almost all the time. Thus it makes it an incredible platform to learn from. There are quite a few organizations that already incorporate social media into their training strategy such as using Twitter for debates, brainstorming, and polls; Facebook for building learning communities and using Youtube for training videos.
- ▶ **BYOD (Bring Your Own Device):** This is what we were referring to when we were talking about m-learning. With the increase in need of personalization, people now want and need to learn in different ways that support their preferred styles. This also pertains to students and workers tending to bring their own device to work or school. Around 75% of employees in high growth markets, and 44% in developed markets, already use their own technology at work. Apart from increasing productivity for obvious reasons, BYOD also makes an organisation appear more flexible. Thus, it is safe to say that the classrooms of the future will need to support the use of multiple devices supporting multiple platforms, and teachers will need to be more than just that – they'll need to be facilitators.

Clearly the future of e-learning is extremely bright, and we are on the cusp of a massive shift technologically and commercially when it comes to
