

Ids, where the latter undertake all the tasks that are generally done by the tech. writers or the graphic designers.

As already stated with IDs, careers in e-learning aren't really description oriented – they're more about the flexibility. People taking up a job in e-learning are expected to take up various responsibilities that extend beyond the domain of their own job. Companies today look to keep their teams lean, and are looking for what they call 'specific generalists'. Careers in e-learning are very demanding and fast-paced – the only way to differentiate in e-learning is to get the job done faster, and companies are usually under tremendous pressure from clients to build solutions rapidly.

So what about the future? We've talked about how staggeringly jaw-droppingly huge e-learning is going to be in the future, and how MOOCs are going to be catering to millions of people – so what employment opportunities does that open up? Let's take a look at the jobs that could very possibly be available thanks to the many possible upcoming trends in e-learning:

- ▶ **Examining and Certification:** Most MOOCs today do not offer a standard degree, and as we have already mentioned, eventually certification of students taking up MOOCs is inevitable. However, because of the problems caused by proximity between the student and the institute, there has to be a middleman of sorts that could take care of the certification process. This gives rise to an opportunity for an independent company to tie up with MOOCs and examine the students taking up that course, and pass on the certificates to the student in case he/she clears the exams. The whole process would still be a cheaper alternative for a student, while providing a new money making avenue.
- ▶ **Tutors/co-learning services:** Something that college learning can provide that e-learning can't is student-teacher interaction. Of course online forums try their best to bridge that gap, but do not come a long way in compensating for the lack of real life interaction. This is where we can expect people in different localities to take up the job of acting as tutor for particular courses. This could also get together a group of people who are taking the same course, and thus can sidestep the drudgery job of learning alone. There will also be a rise of rental lab services for students in an attempt to bridge the gap between an online course and the experience of a college degree.
- ▶ **Education path support/Career counselling:** A college student has his academic path more or less set for the particular duration. However, when it comes to self-learning via online courses, students might find them-
