

they aren't using Windows Movie Maker to do so. The preferred tools of the industry abroad and in India are all on the verge of being cutting edge digital products. The industry oscillates between three brands: Avid Media Composer, Final Cut Pro and Adobe Premier Pro.

Video editing tools

Anyone worth their salt in the media business has at one point or another encountered one of these video editing tools. Avid Media Composer is perhaps the most sophisticated software available on the market closely edging out Final Cut Pro. Adobe Premier Pro boasts of equally strong features and abilities and can be used dynamically with a wide range of Adobe products such as After Effects and Photoshop. Along with the Master or Creative Suite package of tools, it's a perfect tool for learning everything about multimedia editing.

Adobe's tools are very affordable and user-friendly for amateurs who wish to do high quality editing on the cheap. Since it is available on Win-

Avid's Media Composer is widely considered the most advanced and sophisticated application in the industry

dows PC for a relatively low cost, it is widely used by students in the media community, while Final Cut Pro is native to the Mac environment. The cost difference in using the two software is significant and makes Adobe an amateur favourite. Avid,

on the other hand, is for serious video editors who wish to work professionally in the media industry and are willing to make the required investment.

Image editing tools

Beyond video editing there's a whole world of software for image and audio editing, but only a few industry leaders. For image editing, the market leader is the well known Adobe Photoshop software, which has become synonymous with photo editing. For more specialised users who want to edit images without the oodles of options provided by Photoshop, Adobe Lightroom is a fan favourite. But despite Adobe's iron grip over the image editing market, the surge of options from open source and free-to-use
