

images seen in television, movies and online formats to be videos. Earlier, video held a specific meaning that signified a lesser quality and fidelity but with digital recording instruments having leapfrogged in their evolution, this demarcation seems unnecessary. For the purposes of digital editing it is practical to consider it all video since the editing tool can help you deploy even footage shot from a mobile device for the cinematic screening.

When you first run any video editing program, be it Adobe Premiere Pro, Avid Media Composer or Final Cut Pro, you will find a basic layout and structure that is common to all. The window of the generic video editing software is split up in to an assortment of smaller sub-windows that control separate aspects of the editing workflow. These windows are useful in addressing the different aspects of your editing work as needed and can be shut down whenever they are not needed.

The very top of the window displays the name of your project on the Title Bar - which by default is "Untitled" - when you begin. Most software have a startup wizard that asks you to either open an existing project or create a new one. We shall be discussing this process in the Workflow section later. The default division of the window sections can vary with software brand but in their basic state include the following: Project Panel, Source Monitor, Effect Control, Audio Mixer, Program Monitor, Media Browser, Information Panel,

The complexity of editing is in every facet of multimedia and often requires an ecosystem of apps to do a professional level job.
