

PLAYING WITH THE BIG BOYS

We show you the key features and functionality of the programs used by industry professionals around the world.

In a recent online survey the broad community of multimedia editor's online were asked which is their preferred non-linear editing platform. The results were surprising to many old-school editors - the majority of users (63 percent) opted as users of Adobe Premier Pro based system. The distant second in this ranking was Apple Final Cut Pro systems (20 percent) and Sony Vegas Pro (14 percent) users. The last on the list was Avid Media Composer (3 percent) which was most surprising of all.

But looking closely we discover that although Adobe has a clear dominance in the user market, the users are very broadly configured across numerous hardware platforms which include the PC and Mac systems. While Apple is exclusive to their own hardware systems. Another factor for user preferences is the hardware requirements and costs that go along with the respective editing suites, where Avid and Apple are the most expensive ones. Along with these factors the bulk of the users are independent,
