

Clearly video editing is big business. The prices of even the most reasonable professional editing software can seem daunting. And although there do exist lesser priced options within the big brand families like Adobe's Premiere Elements (USD 80 or Rs. 4800/-) or Sony Movie Studio HD (USD 40 or Rs.2400/-), they are little more than watered down versions which restrict the real features most users would want. And even for basic users they can prove to be too expensive, after all why commit to thousands of rupees when you're not even sure you want to really give video editing a serious go?

Precisely for this purpose we present you with a few genuinely free options for the desktop systems. The different software for video, audio and image editing are the very cream of the open source/freeware crop and come with inherent disadvantages. But given their price tag and versatility they surely deserve a go by anyone who wants to experiment with editing without shelling out big bucks or worse - resorting to piracy. Since almost all professional grade editing applications (with the exception of Avid) are freely and easily attainable on torrents we can be thankful for these free alternatives.

Video

As you may have realised by now video editing is a complex software application whose biggest virtue is making the user-experience as easy and intuitive as possible. Keeping that in mind we have whittled down the many free desktop video editing tools down to a brief set of two that can accomplish as much as professional tools without any major downsides like adware or trial periods. The other software under consideration that just couldn't match up to the versatility of our top choices were: Windows
