Run it on: Android and iOS

ited clip length option. The app is similar to Viddy that it allows you to layer videos with sound effects, filters and music to export funky looking videos very quickly. The sharing option on SocialCam as the name implies is fairly outgoing with a wide assortment of social networks being deployed to directly from the

app. The user interface and ease of use make it a favourite of casual editors who aren't looking for too much control and just want cool effects and style to be automated.

Lumify

Get it at: <http://dgit.in/Lumify>

Run it on: iOS

With Lumify we find an app that challenges its users and offers greater amount of control than the usual. Using the app any user can start their editing experience right from the moment of recording. The in-app recording allows you to adjust a multitude of features such as image stabilization, manual focus, exposure control, colour balance and white balance to get the best footage possible. Once the footage has been recorded the app then gives you options of which edits to make using tools such as video trimming, music layering, sound effects, sound syncing, video playback rate to control the speed, text titles, image insertion, frame cropping and even zooming into the footage. With all these variety of features Lumify makes recording, editing and designing shots in a video really very fun and easy. Users can get really involved in the subtle options and make their videos look
