

professional with various playback controls. The ability to sync soundtrack specially makes this video editing app head and shoulders above others. The video you make isn't limited to the same filters and effects like many others and can be considered to be a truly unique production.

Vidtrim

Get it at: <http://dgit.in/VidTrim.And>

Run it on: Android

The VidTrim is a fairly self explanatory app given its name. Not only does this app allow users to edit their footage by trimming and rolling footage as needed but also comes with a variety of built in features. Tools within the app let you apply video

effects to get the best out of your image quality. The app also lets you rip the audio from the video into an MP3 file if that is what you need. The app also transcodes videos which is a rare feature. However given that it is a free version of a paid app - VidTrim Pro - there is a watermark that is placed over any video you make. The paid version is quite powerful in its own right and quite worth investing in if the free version lives up to your expectations.

Andromedia Video Editor

Get it at: <http://dgit.in/Andromedia>

Run it on: Android

The Andromedia Video Editor for the Android platform is one of the better apps currently available. The free app is supported by in-app ads which try their best not to make the user experience too difficult. The features and tools of the app are in themselves very impressive since it allows you to splice together different videos, add music and sound, and even record voice overs directly into a video. The app comes with transitions for both video and audio tracks giving it a more polished and professional feel. The app allows users to choose from a variety of output formats and quality ranges, including Full-HD. The app is a bit jittery and slow when working with large files but that is variable on the hardware the app is working on. The
