

ZeoRing

Get it at: <http://dgit.in/ZeoRing>

Run it on: *Android*

For most users ZeoRing offers the best balance of features and functionality when it comes to audio editing. This highly regarded app presents a easy and simple user interface that can help you trim, edit and finish an audio file within minutes of working on it. The app comes packed with all the essential features that are easy to find and deploy. The app is specially useful when condensing music and song files for making ringtones, notification alerts, alarms and clips to use on your phone. You can also directly assign audio files made in the app to as contact ringtones. The organisational interface of the app is elegant and direct and makes it very easy to find any song file using key metadata like title, artist and date, with a handy search options. The app also supports recording which makes it a definite keeper on the Android system for professionals and nonprofessionals alike.

studio.M

Get it at: <http://dgit.in/studioMiOS>

Run it on: *iOS*

The studio.M app from Soundtrends is a funky and useful app to start audio editing on your mobile devices. With full multi-track support the app comes specially designed for musicians, music producers, songwriters

and sound artists. A toned down version of the company's premium app studio.HD app, it limits users to four audio tracks with either mono or stereo recording modes. Apart from the usual editing, trimming and export options the app boasts an impressive library of digital

instrument loops that can have you spinning club tracks in minutes. The in-built automated mixing and effects options make the task of creating your own unique composition even easier. The touch screen's utility is maximised
