

for the app with very creative and intuitive gestures for getting things done. One of the best mixing features is the apps automatic ability to match up loop and track tempos so audio files captured or created separately harmonise really well together. The app comes with all the necessary instrument you could need considering its a free app but upgrading is an option. The touch pinch zooming of the timeline is smooth and clutter free allowing you to move around clips and trim as close to the beats as possible. The app also provides users with the option importing loops from their computers via iTunes app control panels and mixing it out to the computer as well. And as a total bonus the app is compatible with other music synthesiser apps like Gruvtronic so you can copy and paste audio clips between them. The speed, effectiveness, variety and functionality of studio.M make it a must have for casual as well as intense music editors who wish to be able to compose, experiment and edit on their mobile devices.

Recorder Plus II

Get it at: <http://dgit.in/RecPlusII>

Run it on: iOS

The Recorder Plus II is an all in one on the go recording studio app that does its best to fill every need a mobile sound editor might need. With unlimited duration of recording, AirPlay playback support, high recording quality, compatibility with bluetooth headsets, external mics

and Google Drive backup support the app does have a lot to offer. For amateur and semi-professional story tellers or recording artists this app provides a lot of high quality such as the use of an external mic to record session wirelessly. The app is also tuned towards silences while recording so it can pause saving disk memory and battery life on mobile devices. And with sound sensitive recording it can activate as soon as it's needed without the constant turning on and off from the user. The sound sensitivity for silence mode is customisable so depending on the environment the app can deter-
