

the dependency of high system configuration and expensive proprietary softwares truly frees up the creative and commercial space for users to experiment with multimedia. Whether you're interested in making small adjustments to photographs or make fully fledged movies, there are tools for image, audio and video that work right in the browser. However given the range of difference in online storage costs, connectivity bandwidth and user interface, there is still a long way to go before anyone makes the next Groot on a Chromebook. Keeping those limitations in mind we check out the best web based programs that can help you get close for no cost.

Video

Once again, video remains the crucial linchpin of multimedia editing and given the high size of recorded files, it is indeed challenging to edit footage online. Since upload speeds are typically a fraction of the assigned bandwidth most people subscribe to, the time taken to upload content can be a bit trying. But for people who work in offices with big pipes and professional online storage, the money saved from working on proprietary editing applications easily outweighs this cost. With on going innovations mounting each day we find new and interesting websites popping up that not only make file compression faster while retaining quality but also allow a useful ecosystem where the final edit of the video can easily be shared, streamed or sent across without any need to download the file. Our selections in many cases offer limited functionality unless some sort of payment plan is chosen but even with around 3GB of free storage or Google Drive compatibility (15GB) they work well without any cost on reasonably sized projects.

Creaza Movie Editor

Find it at: <https://www.creazaeducation.com/this-is-creaza/MovieEditor>

It should be first noted that Creaza Movie Editor is just one of the many web services provided by Creaza on their portal. The e-learning website presents users with an assortment of web based editing tools including audio, illustration and video for their multimedia needs. The login interface requires a bit of discovery but once you're in the video editing module things look familiar once again. The layout is clean and straightforward with tabbed buttons giving you direct access to your uploaded videos, transitions, graphics, sound and other media files. There is a very useful collection of loopable video background against which you can use images and text for simpler presentations. The timeline and preview window allow
