

you to directly record video and audio online using attached cameras for projects like webcam lectures as you would expect from e-learning portals. Finished files are exported to your online Portfolio with Creaza and with paid options also allow direct YouTube upload. The options are fairly limited with respect to formats and resolution but functions as a great introduction to the basics of editing and offers a wealth of video clips and add-ons to get people started.

WeVideo

Find it at: <https://www.wevideo.com/>

WeVideo markets itself as an online collaborative video editing program in both free and paid category. Its compatibility with Dropbox and other online storage services makes a lot of the uploading problem easier since cloud backup is always recommended when dealing with critical projects. WeVideo can pull footage from these storage services saving you the hassle of multiple uploading specially since many mobile devices already have an online cloud storage built-in to their interface. The rest of the application is familiar with a drag and drop interface to bring footage into your timeline for editing. The mechanisms to trim and cut sections are easy and quick with the greatest advantage being multiple people working on an edit in a collaborative setting. The application also supports multi-track editing with extensive features in transitions, effects, graphics and animation, along with hundreds of audio loops. However the free accounts don't offer support for
