

low resolution videos limited to 480p that get watermarked when exported. The WeVideo servers only store up to 1GB of project files on free mode can only export 15 minutes of footage per month. On the other hand WeVideo is linked to YouTube so any final footage can directly be ported without having to download and re-upload the same footage. WeVideo definitely is a choice for editing teams that wish to work online and are willing to shell out that extra expense for the services.

YouTube Editor

Find it at: <https://www.youtube.com/editor>

It isn't surprising that YouTube as the big daddy of online video streaming services wouldn't have a online editing options. The YouTube editor option is integrated into their online sharing options giving uploaders a chance to improve their videos. But with its most recent revisions the editing bay in YouTube is as fully functional as other non linear editing softwares. The service allows you to upload and combine multiple videos to create your finished product. There is no limit to the duration of the video and you can easily trim, cut, copy and paste together multiple clips effortlessly. The additional bonus (or flaw) with YouTube is its restriction over the audio files allowed which is mainly due to copyright reasons. Any original tune can

be uploaded and layered, or you can select from YouTube's vast library of free to use tracks that are nearly organised for preview and selection. The online editor boasts a reasonable set of specialised tools that can improve your footage from stabilizing, brightness, contrast, transitions and so much more. There is even a handy Blurring tool that can keep NSFW videos per-
