

missible for online sharing in family friendly settings. In addition to these, YouTube maintains the world's largest online collection of Creative Commons videos which you are free to choose as a part of your project. The size and storage is sorted through your Google account which can be increased from the free 15GB to 100GB or 1TB as needed on a monthly subscription.

Loopster

Find it at: <http://www.loopster.com/>

Loopster is similar to WeVideo as it shares many of the same restriction. The service is limited to low - 480p - resolution with only 3GB on cloud storage for your media. The maximum permitted file size is 1GB. The service can quickly be registered through a Facebook account and gets you started in seconds. The layout is well labeled and easy to understand with separate side boxes for different media files like video, images and audio, followed by boxes for add-ons like text and transitions. The timeline is large and clearly demarcated

for different media types so that images, video, audio and text have their own track, with transitions overlaying them all. The display panel gives you a preview of your final footage which can be Published at a push of a button. The display seems like something for training children but gets the job done. Overall its easier to use layout and interface, combined with the collaborative work environment, Loopster gives WeVideo stiff competition.

Video ToolBox

Find it at: <http://www.videotoolbox.com/>

Video Toolbox claims itself to be the future of video editing and it might be. The free online editing service is fairly advanced compared to other options. The file management system itself is built to ease the uploading and downloading of video files from your computer and other websites. The free usage is restricted with uploads limited to 600 MB and direct
