

truth. The free to use app is at par with GarageBand and provides many of the same features. With the ability to design, compose, edit and share unique compositions all through the browser. The open and friendly nature of the layout makes it very easy to learn so that people, whether they are beginners or professionals, can make the best out of the app. The website gives basic instructions on how instruments tracks and other tools can be used to start a composition. The service lets users pick from different styles and tempos for their composition and share it across social media with a click of a few buttons. The app is available as a Soundcloud add-on and lets users turn vocals into instrumental music for that extra punch. Overall a fun and engaging way to make new music.

Soundnation

Find it at: <http://soundnation.com/>

Soundnation works to not only create music on a web browser but also to remix and edit it in one fell swoop. The style is similar to GarageBand or UJAM with even the same layout and screen design. The service allows

you to work across five audio tracks where you can position music, songs, loops and sound effects to mix together a new track. The Soundnation also offers access to hundreds of free sound clips which can be used to blend together a new

composition. You can also directly upload new sounds via recording options or use the digital instruments to compose tunes. Once the transitions, effects and clips are as you like them they can be exported with a few clicks, ready for download and social media sharing.

TwistedWave Online

Find it at: <https://twistedwave.com/online/>

The TwistedWave Online web browser audio editing tool is a no nonsense applicaiton that cuts right to the job with an old school interface and direct instructions. Ported from a Mac based desktop application the web service delivers a simplified online version that works for most users. The inclusion
