

available on the web. The free online app takes the best of image design and paint tools to enhance any photo editing project. With its intuitive layout

of toolbars and layer panels, the bulk of the screen real estate is dedicated to the working image. The ability to layer images and designs, along with its powerful arsenal of filters, effects, adjustment levels and photog-

raphy fixes, the tool matches up on all counts for users. Finished images can easily be downloaded and then directly shared on social media or other online storage locations.

Fotor

Find it at: <http://www.fotor.com/>

Fotor is a combo web service that not only helps edit photographs but is permeated on mobile devices to help make instant colleges and filtered pics on the go. The online web mode is a refreshing change as it instantly uploads and gets you to a clean work space in seconds. Apart from an advert popup the rest of the screen is unobstructed with clean buttoned options. Photographs can be uploaded either from your computer or various online sources like Dropbox, Facebook, Flickr, Picasa or websites. You can even use your webcam to take a photo for edit. The various options can easily take you from a simple photo to its HDR conversion, or portraits which can be enhanced under the Beauty button. The tools are simple and reflexive to use giving you fairly good results very quickly. The effects options are plentiful and will keep you busy experimenting for different styles. Overall Fotor does a good job as a basic photo editor.

Pics.io

Find it at: <http://pics.io/>

Pics.io is the only free web based photo editing app that is oriented towards serious photographers. The service makes a good case for its skills as it allows for RAW photo images to be uploaded and edited on its website.
