

other making the most slimy, most disgusting sound humanly imaginable. You don't want to pick it up and you really don't want to try fixing it in post. If you want to know how annoying it can be, look for the TED talk about faking it till you make it.

Forget to record tops and tails

When you record, get a little bit of silence before and after the take. Depending on how fast your machine is, there just might be a little bit

That's how you do it!

of delay between the point when you hit record and the point when the recording actually begins. The same goes for the end. If you end with the little bit of silence after the last sound made by the artist, you won't end up missing syllables and it won't sound weird. You can also use these clips as a reference to cut noise.

These are our top tips when it comes to editing across platforms. If you can't remember any of these, just remember our cardinal rule - If you're thinking you can fix it in post, do it again.
