 1  2  3  4  5  6
 7  8  9 10 11 12 13
14 15 16 17 18 19 20
21 22 23 24 25 26 27
28 29 30

```

7. cal

While the date command shows you the current date and time, the cal gives you a calendar for the current month in a layout similar to a physical calendar. By

default it shows the current month but you can specify a different month using the -m flag (E.g. cal -m January gives you the calendar for January of the current year)

8. history

You're aware that using the arrow keys you can cycle through your previous commands. However, this can be tedious for more than a few iterations. The history command gives you your complete history of commands entered in the current shell, along with a number next to each one. If you need to repeat one of those commands, similar enter a '!' followed by the serial number of the command in the output of the history command.

```

Desktop:~$ history
1 source ~/.zshrc
2 ls
3 update && upgrade
4 sshows
5 upgrade
6 sshows
7 e
8 update && upgrade
9 sudo reboot
10 update && upgrade
11 sudo apt-get autoremove
12 upgrade
13 e
14 uname -a
15 whoami
16 date
17 lsb_release -o

```

```

Desktop:~$ df -h
Filesystem      Size  Used Avail Use% Mounted on
udev            17G   5.1G   12G   32% /
tmpfs           4.0G   0 4.0G   0% /sys/fs/cgroup
udev            2.0G   4.0K   2.0G   1% /dev
tmpfs           1.0G   0 1.0G   0% /run
tmpfs            5.0M   0 5.0M   0% /run/lock
tmpfs            2.0G   34K   2.0G   1% /run/user
tmpfs           1.0G   24K   1.0G   1% /run/user

```

9. df

The quickest way to view the free space on all the disks connected to your computer, df (disk-free) shows you the free space in bytes. Using the -h (human-readable) turns the output into Gigabytes, giving you a better idea of size. If you don't supply any arguments, df will show you the free space on your total drive. If you give it the path to a folder (or '.' for the current folder), df will show you the free space available in that specific directory.

6. bc

Working on the terminal and need to make a quick calculation? Use the bc command to open up a tiny calculator on the terminal that you can use for basic arithmetic operations.
