

It can also be useful in finding out all the files that a process uses or that which process uses which files.

Seeking professional help?

After you have exhausted all the repair strategies to the issue and still not arrived at a solution, it is time to seek professional help as the issue might be more technical than you have knowledge of.

However, all your efforts are not wasted as the solution will arrive quickly because of your exhaustive test results, which is exactly what the professionals look for. And when the professionals give their solution, it won't take you much time to understand their repair attempt as you were already half way there. You end up being closer to a pro Linux user.

Some common issues and their solutions

Checking connectivity between two nodes

Sometimes you might face network connectivity issues. To test the connectivity between two nodes in a LAN or WAN environment, simply use the Packet Internet Groper (PING) Command as follows:

```
# ping 4.2.2.2
```

```
PING 4.2.2.2 (4.2.2.2) 56(84) bytes of data:
64 bytes from 4.2.2.2: icmp_seq=1 ttl=64 time=203 ms
64 bytes from 4.2.2.2: icmp_seq=2 ttl=64 time=201 ms
64 bytes from 4.2.2.2: icmp_seq=3 ttl=64 time=201 ms
```
