

you can take a single photograph of up to 50 different Post-its and have them digitized to virtual notes on your devices. These virtual notes are then easily accessible for sharing and editing as you desire.

Evernote on iOS 8

Link: <http://dgit.in/1nwSDIT>

We've often spoken about Evernote as being the definitive productivity app on Apple devices, but with the new enhancements of iOS 8 it truly becomes indispensable. The handy note-taking app is now integrated as a widget to the Notification Centre of your iDevices and lets you quickly jump to take notes, take a picture, access photographs, make reminders, lists and so much more, without ever having to open the Evernote app.

1Password

If you're like most online users, you have to juggle a number of different passwords for all your online services. From emails to online stores, the number of different passwords required can sometimes lead us to forget which one goes where or risking the use of a single password in multiple places. With iOS 8 and the release of the 1Password app, this is no longer the case. The password manager app uses the extensions feature in iOS 8 to allow you to fill in your passwords directly from Safari and a few other apps. For users of iPhone 5S and

above, the Touch ID protection is also integrated to 1Password, making your fingerprints the singular key to all your online gateways.

Instapaper

Instapaper is another “read it later” app like Pocket that has been upgraded to iOS 8. With its own new extension Instapaper can now save content from any other app directly to the your account. In addition to which it also has a “Today” extension which lets you see a list of everything that you have saved over the course of the day, right from the Notification Center itself.
