BUYING ADVICE

Atmos is built for a theatre experience.

SURROUND OR ATMOS

Q Dear Sir, I would like to buy a home theatre system for my home. I want it to be a Dolby Digital Atmos sound system. When in the video the horse would be running, the sound should come from back to front and I should be able to feel it by closing my eyes. If in the video the market is in the left then only the left speaker should give the sound. Please recommend me the system and the accessories.

—Sangsaptak Pal

A Hey Sangsaptak, we think you're confused between Dolby Surround and Dolby Atmos. Dolby Surround sound systems deliver sound in a single plane using five or seven speakers strategically placed around the room. Dolby Atmos adds another dimension by giving you spatial or 360-degree sound, where the sound is delivered from the ceiling of the room. The query you mentioned is for Dolby Surround and buying a 5.1 or 7.1 home theatre system should be enough to take care of it. We would recommend the Samsung HT-J5100K/XL 5.1 Ch Home Theatre system and if you can stretch your budget, you could go for the Yamaha YHT-299 Home Theatre System.

If you're interested in Dolby Atmos for Home, you'll have to shell out more money since the entire system and setup is expensive. It would be a good idea to future proof but do note that you won't find abundant content supporting Dolby Atmos. You will require Dolby Atmos ena-

bled speakers which would fire the sound upwards, giving you the spatial feeling, while you can use regular speakers for the rest along with a Dolby Atmos enabled receiver. For the receiver, you could go either for the Pioneer VSX-930-K or the Denon 7.2 AVR2200W.

SYNAPTIKS

Q Hello, I just bought a Lenovo Ideapad 320e. It has a NVIDIA 940 MX GPU, Intel Core i5 processor and 8 GB of RAM. It came with Free DOS so I tried Ubuntu on it but the touchpad is not working. Drivers are only available for Windows 10. Is moving to Windows 10 the only option because that's what the Lenovo Customer Support told me.

—Vaishnav Sharma

Not everyone provides drivers for Linux.

A Hey Vaishnav, It would appear that the Lenovo Customer Support can't help you out officially since the Linux drivers for Synaptics devices aren't easily available. However, that doesn't mean they aren't there. Open Ubuntu Software Centre and search for "synaptiks" and install that. It will give you all the features of Synaptics that you were looking for. 📌
