Flamin' Hot Cheetos movie

Fox Searchlight and producer DeVon Franklin now have the rights to "Flamin' Hot", a biopic about the creator of Flamin' Hot Cheetos. <http://dgit.in/CheetoMovie>

Corsair Obsidian 500D

A premium level up for enthusiasts

The Obsidian 500D has a beautiful brushed aluminium finish similar to the one seen on their mechanical keyboards. This same finish is carried on the edges of the side panels and the top panel. The hinged panels are removable and the glass has a smoked tint. The fan and radiator mounts on the top and front panel make the installation process easier. You will find dust filters on the top, front and bottom of the cabinet. As a premium cabinet we expected a fan and lighting hub but were disappointed to not find any. Nor did the cabinet include a fan speed or lighting controller on the front I/O. However, it does

feature a USB 3.1 Gen-2 Type-C port which is new for Corsair cabinets. Throughout the cabinet, the build quality is impressive as expected with the Obsidian series. Cable management could have been better.

Two 120 mm fans are included and in this setting under full load, the CPU stabilised at 58 degrees Celsius while the graphics card stayed at 70 degrees. With all fan mounts populated, the CPU reached 52 degrees and the graphics card went up to 60 degrees. Once the stress test was stopped, the CPU and graphics card reached their idle temperatures after 13 and 4 minutes respectively. The Obsidian 500D does seem expensive and the lack of a few features is a complete miss by Corsair but it's a great performer.

—Abhijit Dey

SPECIFICATIONS

MOTHERBOARD FORM FACTOR: Mini-ITX, Micro-ATX, ATX | POWER SUPPLY STANDARD: ATX standard (max. length of 225mm) | I/O PORTS: 2x USB 3.0, 2x USB 3.1 Gen-2 Type-C, 1x microphone, 1x headphone | DRIVE BAYS: 2x 3.5-inch HDD, 3x 2.5-inch SSD | COOLING SUPPORT: 3 x 120mm (front), 2 x 140mm (front), 2 x 120mm (top), 2 x 140mm (top), 1 x 120mm (rear) | RADIATOR SUPPORT: Up to 280/360mm (front), up to 240/280mm (top), up to 120mm (rear) | CLEARANCES: CPU cooler - 170mm, Graphics card - 370mm |

Noctua NH-L12s

Can't go wrong with a Noctua

Noctua has built a reputation for quality, cooling efficiency and low acoustics. They don't release as many models as other brands but they spend a ridiculous amount on R&D towards improving their existing portfolio and that's clearly experienced when using their products. The NH-L12s is an upgraded variant of the NH-L12 wherein they've reduced the height of the cooler from 93 to 70 mm. The 70 mm height is when the included NF-A12 fan is mounted under the fins, when mounted above, the height comes up to 85 mm. There are 58 aluminium fins and each of them are soldered to the heatpipes. Most products from the

VALUE.....75
DESIGN.....83

competition only have a few fins from the entire assembly soldered. With Noctua's approach, there's more headroom for heat to move to the fins from the heatpipes. The unit comes packed with every mounting bracket under the sun except the newly released TR4 since that needs a much larger baseplate and you're better off getting a cooler with a base plate to match. The mounting is

very snug with little wiggle room and the baseplate has a shiny nickel plated surface with a teensy bit of bulge. This allows for a much better contact with the CPU IHS. Performance wise, we achieved a load temperature of 62 degrees with the Intel Core i9-7960X set to default clock speeds. Once we overclocked the CPU, we managed to get a peak temp of 76 degrees which is very good for an air-cooler on our test rig, however, it can't equal the NH-D15. Overall, the Noctua NH-L12s is a worthy successor to the NH-L12 and is a great choice, especially if you are building a compact machine.

—Mithun Mohandas

SPECIFICATIONS

HEIGHT (WITH FAN): 70 mm | WIDTH (WITH FAN): 128 mm | DEPTH (WITH FAN): 146 mm | WEIGHT (WITH FAN/S): 520 g | FAN: 1x NF-A12x15 | MAX RPM: 1850 | MAX AIRFLOW: 94.2 m3/h | MATERIAL: Copper base plate and heat pipes, aluminium fins | WARRANTY: 6 years.
