

Instagram reorganisation

Instagram is dissolving its Global Community Team, which worked to build deep ties with photographers and promote the service around the world. <http://dgit.in/InstaReOrg>

Intel hid flaw

Intel did not inform U.S. cyber security officials of the so-called Meltdown and Spectre chip security flaws until they leaked to the public. <http://dgit.in/IntelHid>

Logitech G613

A worthy ally in wireless gaming

Price
₹8,495

W

ireless gaming is a luxury that wasn't witnessing much

appeal in gaming. The Logitech G613 is one of the products to make its way to the local market before other manufacturers jump on the wireless bandwagon. Using Logitech's LIGHTSPEED wireless technology, the keyboard can connect to your PC or laptop using a USB dongle. It also has the option of connecting via Bluetooth. You can switch between the LIGHTSPEED and Bluetooth connection with the respective buttons on the keyboard. Essentially, you can use the keyboard with your PC as well as your smartphone or tablet. Built on a plastic body, there's minimal flex on the chassis. Overall, the build quality on the G613 is impressive apart from the keycap printing. The legends on the keycap are stickers that generally don't have a long lifespan.

The keyboard uses Logitech's Romer-G mechanical switches boasting a lifespan of 70 million keystrokes. They feel similar to Cherry MX Browns because of the low actuation force of 45 g and a tactile bump or actuation point at 1.5 mm. The actuation point is comparatively higher than Cherry MX switches. We played a few FPS titles and also put the keyboard to test with some Super Meat Boy to check for latency issues. In real-world testing, we weren't able to notice any erroneous keystrokes or the lack of it, nor did we notice any lags. With this keyboard, we won't be able to tell the performance difference from a wired keyboard. If you were looking for a wireless mechanical keyboard for gaming or everyday usage, look no further.

—Abhijit Dey

SPECIFICATIONS

KEYBOARD SIZE: Standard, Numpad included | KEYBOARD BACKLIGHTING: None | SWITCH TYPE: Mechanical (Romer-G 70-million lifecycle) | POLLING RATE: 1,000Hz (1 ms) | KEY-ROLLOVER: 10-key rollover | INTERFACE: USB 2.0 | DIMENSIONS: Width - 47.8 cm, Length - 21.6 cm, Height - 2.2 cm

Xiaomi Redmi Note 5 Pro

The new best in class

Price
₹13,999

T

he new phone brings a dual camera and the Univisium

display to the Redmi line, which thanks to Honor and many others, have become the norm in the category. With the Redmi Note 4 we had a small complaint about the width of the phone and with the Note 5 and the Note 5 Pro, that has been resolved. Xiaomi's solution is to provide a taller 18:9 aspect ratio display. Xiaomi is still using an IPS LCD panel on the phone which has good viewing angles and good colour reproduction. The colour fidelity is not perfect, by default, the display is calibrated to push out slightly warmer tones, which is pleasing in day-to-day use. Qualcomm claims that the Kryo 260 allows for 40% better performance than the Snapdragon 630 powered by eight ARM A53

cores. Along with an Adreno 509 GPU, the Redmi Note 5 Pro just blazes past every other phone at the same price point in synthetic benchmarks. Under ample lighting conditions, the camera captures a good amount of details and has a punchy colour reproduction. The colour reproduction is a little exaggerated, but it's not too far off and at the end of the day will look pleasing to the normal user. The Xiaomi Redmi Note 5 Pro is quite simply the new king in its segment. It offers the sought after combination of performance (speed) and brilliant battery life. The display is good and both the rear and front cameras leave little room for any complaints. We just feel Xiaomi should have launched the phone with Android 8.0 out of the box and with USB Type-C.
