

This star should not exist

Researchers have found a star in the Milky Way with incredibly low amount of metals. <http://digit.in/wyrdstr>

Spiders had tails

An ancient proto-spider preserved in amber. This was before spiders started sitting and waiting for food, making tails unnecessary. <http://digit.in/tailedspider>

HP Elitebook x360 1030 G2

Business 'class'

The Elitebook 1030 G2 is the commercial counterpart of the much loved Spectre x360 laptop from HP. Hence this is a business thin and light with the capabilities of a touch-screen convertible. Flaunting machined aluminium panels on both the front and the back, milled from a single metal block, the Elitebook looks elegantly premium while delivering the underlying feel of robustness. The machine is MIL-810G certified which translates to its ability to combat extreme weather. The laptop features a 13.3-inch 1080p touchscreen display, which supports HP's Active pen, but unfortunately, that is not

bundled with the machine. HP has been updating its keyboards, essentially making them better with each iteration. The keys are firm, have good travel and offer precise feedback. The laptop is quick to boot, fast

in tasks and does allow 4K video output over Thunderbolt 3. Since this is a business laptop, you also get a standard set of HP's security features such as HP SureStart which works at

the BIOS level and ensures that your BIOS remains safe in case it gets attacked by any malicious software or if there is a security breach in the network. All-in-all then, the HP Elitebook 1030 G2 is one of the best thin-and-light convertible business laptops out there. It has the design, the build quality, the performance, the security features, the battery life, best-in-class keyboard, a fine touchpad and a good port selection. The display is the only key area where the HP Elitebook 1030 G2 could have done better.

—Hardik Singh

SPECIFICATIONS

Xiaomi Mi TV 4 55-inch

Good performance at a disruptive price

With the Mi Smart LED TV 4, Xiaomi is offering impressive specifications at disruptive pricing. At its slimmest point the Mi TV 4 measures a mere 4.9 mm. Whether you wall mount it or keep it on a table, the minimalist design ensures that all your attention is focused towards the content on screen. When it comes to connectivity, the Xiaomi Mi LED Smart TV 4 has 3 HDMI ports (one of them is ARC), two USB ports (1x USB 3 and 1x USB 2), an Ethernet port, AV input and good old antenna connection as well. However, the placement of the HDMI ports isn't very convenient. The TV's panel is

reflective but not the most reflective that we have seen. The Mi TV 4 comes with a bunch of preloaded services. Mi TV's PatchWall OS aims to redefine what a smart TV should do i.e., put content first and apps later. As of writing this review only Sony Liv,

Hungama and Voot are active on the TV, but Xiaomi says that more will be active soon. One quirk we have with

the built-in services is that there is no way to know the resolution the content is playing at.

The Lagom black and white levels on the tv are perfect and that is expected from a 10-bit HDR panel. The NTSC, sRGB and Adobe RGB scores fall short when compared to the Sony A1 but what's surprising is that the sRGB isn't far behind. The Mi TV 4 has two downward firing 8 Watt speakers and their performance is okay for a medium sized room. If you are looking to pick up a 4K TV on a budget, you can't go wrong with the Mi TV.

—Sameer Mitha

SPECIFICATIONS

PANEL TYPE: VA | SCREEN TYPE: Flat Panel | RESOLUTION: 3840 x 2160 | HDR: 10-bit | PANEL REFRESH RATE: 60 Hz | HDMI PORTS: 3 | USB PORTS: 2 | BLUETOOTH: Yes, 4.0 | CPU: Amlogic Cortex A53 Quad core, up to 1.8GHz | GPU: Mali-T830 MP2, up to 750MHz | SPEAKERS: 2 x 8W.
