

FOOSBALL TABLE: ₹228

This is a quick DIY, and is pretty easy to do as well. The idea is to use a box to make a foosball table. All the cardboard used in this example comes from a standard Amazon delivery box.

MATERIALS NEEDED

- 6x Dowel Rods: ₹90
- Wooden Cloth Pegs: ₹100
- Cardboard - Free
- 1x Ping Pong Ball: ₹35
- 6x thumb tacks: ₹3

The parts of the build are the box, the footballers and the rods. We used Dowel Rods, which you can get at a baking supply store (not a cake shop) but any kind of round circular rods that are most easily available are fine – metallic, plastic or wood. The most important thing here is to make sure that the sizes of all the parts are matched, the sticks, the clips and the box. First, measure the box to get the size of the rods, then purchase the rods, then when going to the stationery store for the clips, make sure that they fit snugly on the sticks.

STEP 01 The bottom of the box has some folds, which can interrupt the path of the ball in erratic ways. To level the playing field, we simply used the top cover of the box. We printed out and pasted a football pitch first, but this step can be skipped, or you can draw in the lines.

STEP 02 You have to use a scale to mark out evenly spaced holes along the sides of the box you choose. You have to measure the length of the box you are using, and divide that by six

to get the right spacing. If the length is an odd number, just divide that by two and add it to the ends. Drill the holes, or poke them through, and place the dowel rods inside the holes. We used a pen knife. Use a scale to make sure that the holes for the rods are opposite each other. On the opposite side, we used thumb tacks to keep the rods in place.

STEP 03 Now, place the cloth pegs along the rods according to the formation you want. You can get colourful painted cloth pegs from a stationery store or an art supplies shop. There are ways to permanently attach the "footballers" to the rods, but keeping them temporary allows you to strategically switch to different formations, to keep the gameplay fresh.

STEP 04 We created mini footballers of two of our favourite teams, Arsenal and Chelsea (Robert, the Man Utd supporter was fuming!). We printed out the team colours. The front and backs were attached to pegs, which were then attached to paper clips. These look better but you cannot spin the dowels all the way around for extra speed, as you can do with the cloth pegs. You will also have to measure and increase the heights of the sticks from the base.

STEP 05 We made a little scoreboard as well, that can be attached to either end of the foosball table. First we stencilled out the numbers on a vertical strip of paper. The ends were attached to toothpicks, which were then enclosed in tiny wooden windows that we made using the cardboard. Rotating the toothpicks changes the score.

STEP 06 Here we have the finished build, with the TT ball thrown in. We finally get to play foosball in office. This is a quick project that can be used for the amusement of kids.
