

GEOMETRIC LAMP (₹91)

A geometric lamp with pentagons forming a dodecahedron. The complexity can be increased by making interesting cutouts, although we've stuck with the similar pentagon.

MATERIALS NEEDED

- Cardboard - Free
- 2m Wire - ₹16
- 1 LED Bulb (10 watt) - ₹20
- 2-pin plug - ₹20
- Bulb holder - ₹15
- Cellophane sheets (Optional) - 4 for ₹20

STEP 01 Draw a pentagon. We've chosen a side of 6cm

STEP 02 Cut out the first pentagon, then trace 10 more and cut them out too.

STEP 03 (OPTIONAL): Cut smaller pentagons inside the cutouts and stick cellophane patches on the reverse side of the pentagons.

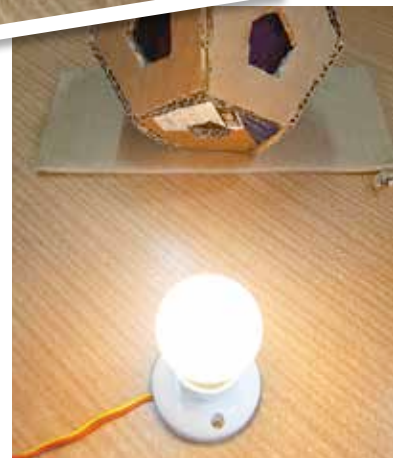

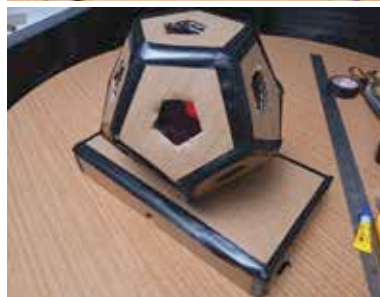

STEP 04 Stick the pentagons together to form a dodecahedron. You do this by sticking

all the sides of all the pentagons to each other. Refer to the image for clarity

STEP 05 Assemble the light bulb and test it out.

STEP 06 Build a base according to the height of your bulb holder and bring the whole thing together.

STEP 07 Switch the lamp on and enjoy the colours (or the shapes, if you skipped the cellophane and made interesting cutouts).
