

THE BEST CAR TECHNOLOGIES AT THE 14TH AUTO EXPO 2018

FROM AN AUTONOMOUS MOTORBIKE TO A BUNCH OF ELECTRIC CARS THAT WILL BE LAUNCHED IN INDIA SOON, HERE'S LOOKING AT THE BEST AUTOMOTIVE TECHNOLOGIES SHOWN AT AUTO EXPO 2018.

Souvik Das | souvik@digit.in

The 14th edition of the biennial Auto Expo has concluded, and this year, the prime theme of the Expo's main exhibits were either cutting edge technology or electric mobility. Still, some other went ahead and presented what happen to be uber-futuristic offerings like one-seater EVs for last mile connectivity, and putting everything together, this year's Expo has been all about seeing the kind of automotive technologies that will be rolled out in India in the near future.

If you somehow couldn't make it all the way to Noida to catch India's biggest automobile extravaganza, we bring to you the most notable technology-laden exhibits that were shown off at the 2018 Auto Expo.

Yamaha Motoroid

Perhaps the most impressive, and one that was not expected to steal the headlines was the Yamaha Motoroid. This motorbike can recognise gestures and faces, unlock and balance itself, and go around by itself, without any kind of human intervention. The motorbike can learn frequently travelled roads to improve riding quality, and even has an HUD projector to project information like speed, navigation, battery status and connectivity in thin air. The Motoroid is, needless to say, a concept till now, but is a marvellous sneak peek at what motorbikes can expect in future. It is also, of course, fully electric, and hence meets the emission standards expected of cars and bikes of the future.
